

Vanguard®

Target Retirement 2035 Fund

Investment Objective

Vanguard Target Retirement 2035 Fund seeks to provide growth of capital and current income consistent with its current asset allocation.

Investment Strategy

Vanguard Target Retirement 2035 Fund currently invests in other Vanguard® mutual funds according to an asset allocation strategy designed for investors planning to retire in or within a few years of 2035. The fund's asset allocation will become more conservative over time. Within 5 to 10 years after 2035, the fund's asset allocation should become similar to that of the Target Retirement Income Fund. The initial allocation for the fund is as follows: Vanguard® Total Stock Market Index Fund, 64%; Vanguard® Total Bond Market Index Fund, 20%; Vanguard® European Stock Index Fund, 11%; and Vanguard® Pacific Stock Index Fund, 5%.

The fund's indirect stock holdings consist substantially of large-capitalization U.S. stocks and, to a lesser extent, of mid- and small-cap U.S. stocks. The fund also invests a portion of its assets in foreign stocks. The fund's indirect bond holdings are a diversified mix of investment-grade, taxable U.S. government, U.S. agency, and corporate bonds, as well as mortgage-backed securities, all with maturities of more than 1 year.

See reverse side for Fund Profile.

Who Should Invest

- Investors seeking long-term growth of capital and income.
- Investors seeking a simple way to achieve a broadly diversified holding of stocks and bonds that will gradually become more conservative in its allocation.
- Investors seeking to retire in or near 2035.

Who Should Not Invest

- Investors unwilling to accept significant fluctuations in share price.
- Investors seeking significant current income.
- Investors expecting a guaranteed sum or level of income upon retirement.

A Few Words About Risk

When investing in balanced funds, short-term losses (or gains) are common, largely as a result of sudden movements in the prices of stocks and bonds as interest rates fluctuate and economic conditions change. However, over extended periods the market's ups have tended to outweigh its downs. There is no guarantee this will continue. Usually, the longer you hold your investments, the lower your chances of losing money. Also, because stock and bond prices often (but not always) move in opposite directions, a fund that holds

Overall Risk Level:

both stocks and bonds can help to lessen its volatility.

Balanced fund investors should also consider credit risk, the possibility that a bond issuer may be unable to make timely payments of interest and principal. Bonds issued by the U.S. government and its agencies carry the highest level of credit protection.

Investment Terms

Bond: An investment in which you lend money to a company, a government, or a government agency. The bond issuer agrees to pay back the loan by a certain date and to pay interest during that period.

Dividends: Payments made by companies to investors in their stock. The payments typically depend on economic conditions and the company's financial health.

Expenses: The costs of running a fund, expressed as a percentage of the fund's assets. For example, a fund may have expenses that total 0.30% (less than half of 1%) of its assets.

Interest: Payments made by a company, a government, or a government agency to investors who lend them money. For example, an investor buys a bond from a company, which agrees to pay back the loan by a certain date at a set rate.

Market Risk: The chance that the value of an investment will change because of rising (or falling) stock or bond prices.

Mutual Fund: An investment company that combines the money of thousands of people and invests it in a number of securities (stocks, bonds, short-term reserves) to achieve a specific objective over time.

Total Return: The change in the value of an investment, plus any income from interest or dividends. The standard measure of a mutual fund's performance.
